Stpm Biology Notes Chapter 1

Clemens Wendtner

Stpm Biology Notes Chapter 1:

The Biological Roots of Human Nature Timothy H. Goldsmith, 1994 In this stimulating book Goldsmith argues that biology has a great deal to say that should be of interest to social scientists historians philosophers and humanists in general He believes that anyone studying the social behavior of humans must take into consideration both proximate cause the physiology biochemistry and social mechanisms of behavior and ultimate cause how the behavior came to exist in evolutionary time Goldsmith a neurobiologist draws examples from neurobiology psychology and ethology behavioral evolution The result is a work that overcomes many of the misconceptions that have hindered the rich contributions the biological sciences have to offer concerning the evolution of human society behavior and sense of identity Among the key topics addressed are the nature of biological explanation the relationship between genes and behavior those aspects of behavior most likely to respond to natural selection the relationship between evolution and learning and some probable modes of interaction between cultural and biological evolution By re examining the role of biological explanation in the domain of social development the author has significantly advanced a more well rounded view of human evolution and shed new light on the perennial question of what it means to be human His book will appeal to biologists social scientists traditional humanists and interested general readers

Flowering Plants. Monocotyledons Klaus Kubitzki, 2013-04-17 When Rolf Dahlgren and I embarked on preparing this book series Rolf took prime responsibility for monocotyledons which had interested him for a long time After finishing his comparative study and family classification of the monocots he devoted much energy to the acquisition and editing of family treatments for the present series After his untimely death Peter Goldblatt who had worked with him continued to handle further incoming monocot manuscripts until in the early 1990s his other obligations no longer allowed him to continue At that time some 30 manuscripts in various states of perfection had accumulated which seemed to form a solid basis for a speedy completion of the FGVP monocots with the exception of the grasses and orchids which would appear in separate volumes I felt a strong obligation to do everything to help in publishing the manuscripts that had been put into our hands I finally decided to take charge of them personally although during my life as a botanist I had never seriously been interested in monocots

The Human Difference Alan Wolfe, 2023-04-28 Are we losing touch with our humanity Yes contends Alan Wolfe in this provocative critique of modern American intellectual life From ecology sociobiology and artificial intelligence to post modernism and the social sciences Wolfe examines the antihumanism underlying many contemporary academic trends Animal rights theorists and ecological extremists too often downplay human capacities Computers are smarter than we are and will soon replace us as the laws of evolution continue to unfold Even the humanities held in sway by imported theories that are explicitly antihumanistic in intention have little place for human beings Against this backdrop Wolfe calls for a return to a moral and humanistic social science one in which the qualities that distinguish us as a species are given full play Tracing the development of modern social theory Wolfe explores

the human centered critical thinking of eighteenth and nineteenth century scholars now eclipsed by post modern and scientistic theorizing In the work of Durkheim Marx Weber and Mead human beings are placed on the center stage shaping and interpreting the world around them Sociology in particular emerged as a distinct science because the species it presumed to understand was distinct as well Recent intellectual trends in contrast allow little room for the human difference Sociobiology underlines the importance of genetics and mathematically governed evolutionary rules while downplaying the unique cognitive abilities of humans Artificial intelligence heralds the potential superiority of computers to the human mind Post modern theorizing focuses on the interpretation of texts in self referential modes rejecting humanism in any form And mainstream social science using positivist paradigms of human behavior based on the natural sciences develops narrow and arid models of social life Wolfe eloquently makes a case for a new commitment to humanistic social science based on a realistic and creative engagement with modern society A reconstituted social science acknowledging our ability to interpret the world will thrive on a recognition of human difference Nurturing a precious humanism social science can celebrate and further refine our unique capacity to create morality and meaning for ourselves This title is part of UC Press s Voices Revived program which commemorates University of California Press s mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1993 Are we losing touch with our humanity Yes contends Alan Wolfe in this provocative critique of modern American intellectual life From ecology sociobiology and artificial intelligence to post modernism and the social sciences Wolfe examines the antihu
