Emergence of the Digital Humanities* Steven E. Jones, 2013-08-15 The past decade has seen a profound shift in our collective
understanding of the digital network What was once understood to be a transcendent virtual reality is now experienced as a
ubiquitous grid of data that we move through and interact with every day raising new questions about the social locative
embodied and object oriented nature of our experience in the networked world In *The Emergence of the Digital Humanities*
Steven E Jones examines this shift in our relationship to digital technology and the ways that it has affected humanities
scholarship and the academy more broadly Based on the premise that the network is now everywhere rather than merely out
there Jones links together seemingly disparate cultural events the essential features of popular social media the rise of
motion control gaming and mobile platforms the controversy over the gamification of everyday life the spatial turn
fabrication and 3D printing and electronic publishing and argues that cultural responses to changes in technology provide an
essential context for understanding the emergence of the digital humanities as a new field of study in this millennium The
