Small Wind Systems For Rural Energy Services:

Small Wind Systems for Rural Energy Services Smaïl Khennas, Simon Dunnett, Hugh Piggott, 2003 This book provides a concise guide to all the essential steps for setting up wind business services in developing countries It deals with all the key aspects of promoting wind energy for domestic end uses as well as giving a guide to needs assessment resource assessment the economics of small wind machines and technology choice Most of the practical information explained in this book is taken from installations in Peru and Sri Lanka The book describes the factors critical for sustainable development of small wind systems in rural areas It also addresses the challenge of scaling up defined as the conditions and the strategy needed to move from a limited number of units to a widespread sustainable industry Institutional aspects business development and the policy environment are also examined

Energy and the Environment Reza Toossi, 2009

Energy and the Environment is conceived and written at a level suitable for use as an introductory undergraduate textbook in energy and environment for students with very little mathematics or science background It can also be used by anyone interested in technical political environmental and economical issues related to energy To make the text appropriate for engineering and science students additional topics are included within information boxes placed throughout the book and in the appendices Examples requiring algebra are indicated in a similar manner Depending on the audience instructors can decide to eliminate all or part of this material without loss of continuity Each chapter in Energy and the Environment stands alone and the text can be taught in any order that the instructor deems suitable Widely different curricula can therefore be designed and tailored for any audience simply by focusing on the appropriate sections from the appropriate chapters For example an environmental engineering course might include the summaries of various energy sources types with an emphasis on air pollution radiation and environmental economics A science curriculum might alternately emphasize the various technological sections and incorporate some of the engineering designs This book is now available and can be purchased at <http://vervepublishers.com> You may also order a free examination copy if you are considering adopting the Energy and the Environment for your classes I would be most pleased to receive comments and thank you for your time

Mini-Grids for Rural Electrification of Developing Countries Subhes C. Bhattacharyya, Debajit Palit, 2014-05-31

In recognition of the fact that billions of people in the developing world do not have access to clean energies the United Nations launched the Sustainable Energy for All Initiative to achieve universal energy access by 2030 Although electricity grid extension remains the most prevalent way of providing access it is now recognized that the central grid is unlikely to reach many remote areas in the near future At the same time individual solutions like solar home systems tend to provide very limited services to consumers Mini grids offer an alternative by combining the benefits of a grid based solution with the potential for harnessing

renewable energies at the local level The purpose of this book is to provide in depth coverage of the use of mini grids for rural electrification in developing countries taking into account the technical economic environmental and governance dimensions and presenting case studies from South Asia This book reports on research carried out by a consortium of British and Indian researchers on off grid electrification in South Asia It provides state of the art technical knowledge on mini grids and micro grids including renewable energy integration or green mini grids smart systems for integration with the central grid and standardization of systems It also presents essential analytical frameworks and approaches that can be used to analyze the mini grids comprehensively including their techno economic aspects financial viability and regulatory issues The case studies drawn from South Asia demonstrate the application of the framework and showcase various successful efforts to promote mini grids in the region It also reports on the design and implementation of a demonstration project carried out by the team in a cluster of villages in Odisha India The book s multi disciplinary approach facilitates understanding of the relevant practical dimensions of mini grid systems such as demand creation through interventions in livelihood generation and value chain development financing regulation and smart system design Its state of the art knowledge integrated methodological framework simulation exercises and real life case analysis will allow the reader to analyze and appreciate the mini grid related activities in their entirety The book will be of interest to researchers graduate students practitioners and policy makers working in the area of rural electrification in developing countries

Bundles of Energy Duncan

Macqueen,Sibel Korhaliller,2011 This report aims to inform forest and energy decision makers in non OECD countries of key issues surrounding the biomass energy boom It describes the advantages and challenges of biomass how it compares with renewable alternatives and how to develop policy frameworks that optimise its impact on poverty reduction climate change mitigation and the preservation of ecosystem services It seeks to stimulate interest in the topic and promote serious discussion about how the full potential of biomass energy can be harnessed in the service of national interests

Energy Services for the World's Poor Penelope J. Brook,Suzanne Smith,2000

Sustainable Energy Solutions in Agriculture

Jochen Bundschuh,Guangnan Chen,2014-03-07 Sustainability in agriculture and associated primary industries which are both energy intensive is crucial for the development of any country Increasing scarcity and resulting high fossil fuel prices combined with the need to significantly reduce greenhouse gas emissions make the improvement of energy efficient farming and increased use of renewable energy essential This book provides a technological and scientific endeavor to assist society and farming communities in different regions and scales to improve their productivity and sustainability To fulfill future needs of a modern sustainable agriculture this book addresses highly actual topics providing innovative effective and more sustainable solutions for agriculture by using sustainable environmentally friendly renewable energy sources and modern energy efficient cost improved technologies The book highlights new areas of research and further R D needs It helps to improve food security for the rapidly growing world population and to reduce carbon dioxide emissions from fossil fuel use in

agriculture which presently contributes 22% of the global carbon dioxide emissions This book provides a source of information stimuli and incentives for what and how new and energy efficient technologies can be applied as effective tools and solutions in agricultural production to satisfy the continually increasing demand for food and fibre in an economically sustainable way while contributing to global climate change mitigation It will be useful and inspiring to decision makers working in different authorities professionals agricultural engineers researchers and students concerned with agriculture and related primary industries sustainable energy development and climate change mitigation projects Energy Access, Poverty, and Development Benjamin K. Sovacool, Ira Martina Drupady, 2016-04-29 This book showcases how small scale renewable energy technologies such as solar panels cookstoves biogas digesters microhydro units and wind turbines are helping Asia respond to a daunting set of energy governance challenges Using extensive original research this book offers a compendium of the most interesting renewable energy case studies over the last ten years from one of the most diverse regions in the world Through an in depth exploration of case studies in Bangladesh China India Laos Indonesia Malaysia Mongolia Nepal Papua New Guinea and Sri Lanka the authors highlight the applicability of different approaches and technologies and illuminates how household and commercial innovations occur or fail to occur within particular energy governance regimes It also uniquely explores successful case studies alongside failures or worst practice examples that are often just as revealing as those that met their targets Based on these successes and failures the book presents twelve salient lessons for policymakers and practitioners wishing to expand energy access and raise standards of living in some of the world's poorest communities It also develops an innovative framework consisting of 42 distinct factors that explain why some energy development interventions accomplish all of their goals while others languish to achieve any Meeting Challenges, Measuring Progress Douglas F. Barnes, Hussain Samad, Salvador Rivas, 2018-11-14 Energy access is an essential prerequisite for economic social and human development The 2015 United Nations Sustainable Development Goals SDGs explicitly recognized affordable and clean energy as a key factor in development alongside education and poverty alleviation The UN Sustainable Energy for All initiative SEforALL mobilizes international donors countries and the private sector to help people in developing countries gain access to modern energy services To assist in support of SEforALL goals this joint study of the Inter American Development Bank IDB and the United Nations Development Programme UNDP provides a comprehensive review of energy poverty policies and programs in Latin America and the Caribbean LAC This report measures the progress and impact of energy access programs and also documents the experience of successful projects This study reviews cutting edge methodologies to assist in program design shares of experiences of successful programs and develops a vision for reaching sustainable energy for all in the LAC region With electricity coverage at more than 96 percent LAC is close to becoming the world's first developing region to achieve universal access to electricity Despite recent progress within LAC there are still substantial pockets of energy poverty Approximately 21.8 million people are without electricity access More

than 80 million people rely on firewood and charcoal for cooking that is burned in fuel inefficient primitive stoves. These traditional cooking technologies emit a significant amount of indoor air pollution (IAP) which has been linked to respiratory illnesses and adverse environmental impacts. Thus, in addition to promoting electricity energy access programs, also might give priority to the promotion of cleaner methods of cooking by making available better stoves and cleaner burning fuels at reasonable costs. The report also explores ways to measure energy poverty and monitor energy access in developing countries. The accuracy and effectiveness of tools such as the IEA's household energy data efforts and the Global Tracking Framework depend on collecting information through standardized national surveys. Approaches to measure energy poverty and monitor energy access have increasingly focused on the provision of energy services such as lighting, space conditioning and cooking. The transition from low quality energy services to more modern forms can be accomplished in different ways. As households in developing countries adopt electricity and clean methods of cooking, they benefit from higher quality, lower cost and convenient to use appliances. However, measuring the societal and developmental benefits of energy investments, though difficult, is important. Two basic approaches have evolved over the years to measure the benefits of energy access: i) consumer surplus and ii) regression based techniques. The consumer surplus approach evaluates the economic benefits of energy services through measuring increased demand resulting from lower costs of such energy end uses such as lighting, radio and television. When possible, rigorous impact evaluation techniques based on multivariate models can be used to more directly measure the socioeconomic benefits associated with energy access and modern energy services including higher income and improved education. In recent years, new approaches for meeting the requirements of modern and sustainable energy services have emerged. Due to technical and market changes, new types of equipment have become available for providing energy services to rural areas. In LAC, three basic models have been developed to provide rural populations with electricity service: i) main grid extension, ii) community networks and iii) individual home based systems including clean cookstoves.
