The Assessment Of Bilingual Aphasia Neuropsychology And Neurolinguistics Series:

The Assessment of Bilingual Aphasia Michel Paradis, Gary Libben, 2014-03-05 The Bilingual Aphasia Test is a comprehensive language test designed to assess the differential loss or sparing of various language functions in previously bilingual individuals. The individual is tested separately in each language he or she previously used and then in the two languages simultaneously. The testing is multimodal, sampling hearing, speaking, reading, and writing, and multidimensional, testing various linguistic levels: phonological, morphological, syntactic, lexical, and semantic tasks, comprehension, repetition, judgment, lexical access, and propositionizing, and units: words, sentences, and paragraphs. The BAT is structured as follows: To test a bilingual aphasic, you will need the following testing elements: the stimulus books for each of the languages in which the individual was formerly fluent, the single language tests for each of these languages, as well as the bilingual test that links them. For example, if you are testing an English-French bilingual aphasic, you will need an English stimulus book, a French stimulus book, an English single language test, a French single language test, and an English-French bilingual test. The BAT can also be used to test monolingual aphasics. To test for monolingual aphasia, you will need the stimulus book and the single language test in the language in which the individual was formerly fluent. Professor Paradis' book, *The Assessment of Bilingual Aphasia*, provides the background material and serves as the manual for the test. The BAT is available in dozens of languages and language pairs. There are now 106 bilingual pairs available. Additional single language and bilingual tests are being prepared continuously. If the language or language pair you need is not listed, please call LEA to find out if and when it will be available.

The Pragmatic Basis of Aphasia Marc L. Schnitzer, 2014-02-24 This language study's primary purpose is to use aphasic performance to understand language rather than to use linguistic analysis to understand aphasia. Examining the detailed nature of linguistic performance of bilingual aphasics in a variety of natural and metalinguistic tasks, the book reports the results of a study of morphology and syntax among Spanish-English bilingual and monolingual hispanophones in Puerto Rico.

Neuropsychology of Eye Movement Cris W. Johnston, Francis J. Pirozzolo, 2013-08-21 First Published in 1988. The idea for this book arose from a desire to bring together relevant information from the fields of vision research, neuropsychology, neurology, and psychiatry. The selection of topics covered by *Neuropsychology of Eye Movements* conforms to the primary areas of inquiry that currently exist. Unlike the majority of other books on eye movements, which represent proceedings of meetings, this volume is comprised of a number of critical reviews of the research literature.

Language Typology and Language Universals Martin Haspelmath, 2001 This series of HANDBOOKS OF LINGUISTICS AND

COMMUNICATION SCIENCE is designed to illuminate a field which not only includes general linguistics and the study of linguistics as applied to specific languages but also covers those more recent areas which have developed from the increasing body of research into the manifold forms of communicative action and interaction. For classic linguistics there appears to be a need for a review of the state of the art which will provide a reference base for the rapid advances in research undertaken from a variety of theoretical standpoints while in the more recent branches of communication science the handbooks will give researchers both an overview and orientation. To attain these objectives the series will aim for a standard comparable to that of the leading handbooks in other disciplines and to this end will strive for comprehensiveness, theoretical explicitness, reliable documentation of data and findings and up to date methodology. The editors both of the series and of the individual volumes and the individual contributors are committed to this aim. The languages of publication are English, German and French. The main aim of the series is to provide an appropriate account of the state of the art in the various areas of linguistics and communication science covered by each of the various handbooks; however, no inflexible pre-set limits will be imposed on the scope of each volume. The series is open-ended and can thus take account of further developments in the field. This conception coupled with the necessity of allowing adequate time for each volume to be prepared with the necessary care means that there is no set time-table for the publication of the whole series. Each volume will be a self-contained work complete in itself. The order in which the handbooks are published does not imply any rank-ordering but is determined by the way in which the series is organized. The editor of the whole series enlists a competent editor for each individual volume. Once the principal editor for a volume has been found, he or she then has a completely free hand in the choice of co-editors and contributors. The editors plan each volume independently of the others, being governed only by general formal principles. The series editor only intervenes where questions of delineation between individual volumes are concerned. It is felt that this *modus operandi* is best suited to achieving the objectives of the series, namely to give a competent account of the present state of knowledge and of the perception of the problems in the area covered by each volume.

Contemporary Applied Linguistics Volume 2 Li Wei, Vivian Cook, 2009-06-23. Both volumes represent the best of current practice in applied linguistics and will be invaluable to students and researchers looking for an overview of the field.
