2. Angles using protractor:

3. Drawing an angle equivalent to given angle:

Steps for construction

- Draw a ray HJ which will serve as one arm of the angle.
- Mark the vertex a point H on the ray HJ. This point will be the vertex of the angle.
- Place the protractor with its centre point at H and align the baseline of the protractor with ray HJ.
- Using the protractor, mark a point at the required degree measure for the angle (as per the given figure).
- Remove the protractor and draw another ray HI from the vertex H through the marked point. This ray will form the second arm of the angle.
- Label the new ray's endpoint as I, completing the construction of angle $\angle I H J$.

This completes the construction of the angle as shown in the image.
