Evapotranspiration and its components evaporation and transpiration as a process is one of the basic terms of Earth's water balance its importance is accentuated by the fact that transpiration is the vital element of the biomass production process The second important property of evapotranspiration is its extreme consumption of solar energy thus controlling the temperature of the atmosphere and creating favourable conditions for life Evapotranspiration as an energy consuming process is also the connection between the energy and mass cycles of the Earth Evapotranspiration is a process performing in the Soil Plant Atmosphere System SPAS therefore this book is presenting and quantifying it as a catenary process describing transport of water in the soil including root extraction patterns and methods of its evaluation Transport of water through the plant and from the canopy to the atmosphere is also described and quantified A variety of evapotranspiration and its component evaporation and transpiration calculation methods are described starting from empirical methods up to the most sophisticated ones based on the solution of the transport equations of water and energy in the SPAS The most important and widely used calculation method modified Penman Monteith method is described in details ready to be used with data in the book only Water balance method of evapotranspiration estimation as well as sap flow method description can be found in the book as well The book can be used by hydrologists biologists meteorologists and other specialists as well as by ecology

students Key themes soil hydrology evapotranspiration hydrogeology plant physiology water movement in soils evaporation transpiration Dr Viliam Novák is a water resources scientist at the Institute of Hydrology of the Slovak Academy of Sciences in Bratislava Slovakia

Modelling Water Flow in Unsaturated Porous Media Adam Szymkiewicz, 2012-10-11 The book focuses on two issues related to mathematical and numerical modelling of flow in unsaturated porous media In the first part numerical solution of the governing equations is discussed with particular emphasis on the spatial discretization of highly nonlinear permeability coefficient The second part deals with large scale flow in heterogeneous porous media of binary structure Upscaled models are developed and it is shown that the presence of material heterogeneities may give rise to additional non equilibrium terms in the governing equations or to hysteresis in the averaged constitutive relationships

Craig's Soil Mechanics Jonathan Knappett, R.F. Craig, 2012-02-09 Now in its eighth edition this bestselling text continues to blend clarity of explanation with depth of coverage to present students with the fundamental principles of soil mechanics From the foundations of the subject through to its application in practice Craig's Soil Mechanics provides an indispensable companion to undergraduate courses and b Soil, Plant and Atmosphere Klaus Reichardt, Luís Carlos Timm, 2019-08-16 This textbook presents the concepts and processes involved in the soil plant atmosphere system as well as its applications in the water cycle in agriculture Although reaching the frontier of our knowledge in several subjects each chapter starts at the graduation level and proceeds to the post doctoral level Its more complicated subjects as math and physics are well explained even to readers not well acquainted with these tools Therefore it helps students read understand and developing their thoughts on these subjects Instructors also find it an easy book with the needed depth to be adopted in courses related to Soil Physics Agricultural Management Environmental Protection Irrigation and Agrometeorology It serves also as lexicon to engineers and lawyers involved in agricultural environmental cases
