Synthetic Aperture Radar Signal Processing And Digital Filtering:

Synthetic Aperture Radar J. Patrick Fitch, 2012-12-06 Radar like most well developed areas has its own vocabulary Words like Doppler frequency pulse compression mismatched filter carrier frequency in phase and quadrature have specific meaning to the radar engineer In fact the word radar is actually an acronym for RAdio Detection And Rang ing Even though these words are well defined they can act as road blocks which keep people without a radar background from utilizing the large amount of data literature and expertise within the radar community This is unfortunate because the use of digital radar processing techniques has made possible the analysis of radar signals on many general purpose digi tal computers Of special interest are the surface mapping radars such as the Seasat and the shuttle imaging radars which utilize a technique known as synthetic aperture radar SAR to create high resolution images pic tures This data appeals to cartographers agronomists oceanographers and others who want to perform image enhancement parameter estima tion pattern recognition and other information extraction techniques on the radar imagery The first chapter presents the basics of radar processing techniques for calculating range distance by measuring round trip propagation times for radar pulses This is the same technique that sightseers use when calculat ing the width of a canyon by timing the round trip delay using echoes In fact the corresponding approach in radar is usually called the pulse echo technique *Communications, Signal Processing, and Systems* Qilian Liang, Wei Wang, Xin Liu, Zhenyu Na, Min Jia, Baoju Zhang, 2020-04-04 This book brings together papers from the 2019 International Conference on Communications Signal Processing and Systems which was held in Urumqi China on July 20 22 2019 Presenting the latest developments and discussing the interactions and links between these multidisciplinary fields the book spans topics ranging from communications to signal processing and systems It is chiefly intended for undergraduate and graduate students in electrical engineering computer science and mathematics researchers and engineers from academia and industry as well as government employees **Synthetic Aperture Radar** J. Patrick Fitch, C. S. Burrus, 1987-12-01 *Spotlight-Mode Synthetic Aperture Radar: A Signal Processing Approach* Charles V. J. Jakowatz, Daniel E. Wahl, Paul H. Eichel, Dennis C. Ghiglia, Paul A. Thompson, 2012-12-06 Modern airborne and spaceborne imaging radars known as synthetic aperture radars SARs are capable of producing high quality pictures of the earth s surface while avoiding some of the shortcomings of certain other forms of remote imaging systems Primarily radar overcomes the nighttime limitations of optical cameras and the cloud cover limitations of both optical and infrared imagers In addition because imaging radars use a form of coherent illumination they can be used in certain special modes such as interferometry to produce some unique derivative image products that incoherent systems cannot One such product is a highly accurate digital terrain elevation map DTEM The most recent ca 1980 version of imaging radar known as spotlight mode SAR can produce imagery with spatial resolution that begins to approach that of remote optical imagers For all of these reasons synthetic aperture radar imaging is rapidly becoming a key technology in the world of modern remote sensing Much

of the basic workings of synthetic aperture radars is rooted in the concepts of signal processing. Starting with that premise, this book explores in depth the fundamental principles upon which the spotlight mode of SAR imaging is constructed using almost exclusively the language concepts and major building blocks of signal processing. *Spotlight Mode Synthetic Aperture Radar: A Signal Processing Approach* is intended for a variety of audiences. Engineers and scientists working in the field of remote sensing but who do not have experience with SAR imaging will find an easy entrance into what can seem at times a very complicated subject. Experienced radar engineers will find that the book describes several modern areas of SAR processing that they might not have explored previously, e.g., interferometric SAR for change detection and terrain elevation mapping or modern non-parametric approaches to SAR autofocus. Senior undergraduates primarily in electrical engineering who have had courses in digital signal and image processing but who have had no exposure to SAR could find the book useful in a one-semester course as a reference.
