Soft Computing In Artificial Intelligence Advances In Intelligent Systems And Computing:

Soft Computing in Artificial Intelligence Young Im Cho, Eric T. Matson, 2014-07-08 This book explores the concept of artificial intelligence based on knowledge based algorithms. Given the current hardware and software technologies and artificial intelligence theories, we can think of how efficient to provide a solution, how best to implement a model, and how successful to achieve it. This edition provides readers with the most recent progress and novel solutions in artificial intelligence. This book aims at presenting the research results and solutions of applications in relevance with artificial intelligence technologies. We propose to researchers and practitioners some methods to advance the intelligent systems and apply artificial intelligence to specific or general purpose. This book consists of 13 contributions that feature fuzzy r s minimal pre and open sets, handling big cooccurrence matrices, Xie Beni type fuzzy cluster validation, fuzzy c regression models, combination of genetic algorithm and ant colony optimization, building expert system, fuzzy logic and neural network, individual role adaptation for team sports, application of polynomial neural networks, recursive neuro fuzzy algorithm for water management, application of interactive genetic algorithm and Artificial Neural Network ANN model. This edition is published in original peer reviewed contributions covering from initial design to final prototypes and verification. *Hard and Soft Computing for Artificial Intelligence, Multimedia and Security* Shin-ya Kobayashi, Andrzej Piegat, Jerzy Pejaś, Imed El Fray, Janusz Kacprzyk, 2016-10-19 This book gathers the proceedings of the 20th International Conference on Advanced Computer Systems 2016 held in Międzyzdroje, Poland, on October 19-21, 2016. Addressing topics that include artificial intelligence, AI software technologies, multimedia systems, IT security, and design of information systems, the main purpose of the conference and the book is to create an opportunity to exchange significant insights on this area between science and business. In particular, this expertise concerns the use of hard and soft computational methods for artificial intelligence, image and data processing, and finally the design of information and security systems. The book contains a collection of carefully selected peer reviewed papers, combining high quality original unpublished research, case studies, and implementation experiences. *Advances in Intelligent Automation and Soft Computing* Xiaolong Li, 2021-07-26 This book presents select proceedings of the International Conference on Intelligent Automation and Soft Computing IASC2021. Various topics covered in this book include AI algorithm, neural networks, pattern recognition, machine learning, blockchain technology, system engineering, computer vision, and image processing, adaptive control, and robotics, big data, and data processing, networking, and security. The book is a valuable reference for beginners, researchers, and professionals interested in artificial intelligence, automation, and soft computing. **Soft Computing in Computer and Information Science** Antoni Wiliński, Imed El Fray, Jerzy Pejaś, 2015-03-19 This book presents a carefully selected and reviewed collection of papers presented during the 19th Advanced Computer Systems conference ACS 2014. O. Karray, Clarence W. De Silva, 2004 Traditional artificial intelligence AI techniques are based around mathematical techniques of symbolic logic with programming in languages such as Prolog and LISP invented in the 1960s These are referred to as crisp techniques by the soft computing community The new wave of AI methods seeks inspiration from the world of biology and is being used to create numerous real world intelligent systems with the aid of soft computing tools These new methods are being increasingly taught at the upper end of the curriculum sometimes as an adjunct to traditional AI courses and sometimes as a replacement for them Where a more radical approach is taken and the course is being taught at an introductory level we have recently published Negnevitsky's book Karray and Silva will be suitable for the majority of courses which will be found at an advanced level Karray and de Silva cover the problem of control and intelligent systems design using soft computing techniques in an integrated manner They present both theory and applications including industrial applications and the book contains numerous worked examples problems and case studies Covering the state of the art in soft computing techniques the book gives the reader sufficient knowledge to tackle a wide range of complex systems for which traditional techniques are inadequate
