Soft Computing And Intelligent Systems Soft Computing And Intelligent Systems:

Soft Computing and Intelligent Systems Design Fakhreddine O. Karray, Clarence W. De Silva, 2004 Traditional artificial intelligence AI techniques are based around mathematical techniques of symbolic logic with programming in languages such as Prolog and LISP invented in the 1960s These are referred to as crisp techniques by the soft computing community The new wave of AI methods seeks inspiration from the world of biology and is being used to create numerous real world intelligent systems with the aid of soft computing tools These new methods are being increasingly taught at the upper end of the curriculum sometimes as an adjunct to traditional AI courses and sometimes as a replacement for them Where a more radical approach is taken and the course is being taught at an introductory level we have recently published Negnevitsky's book Karray and Silva will be suitable for the majority of courses which will be found at an advanced level Karray and de Silva cover the problem of control and intelligent systems design using soft computing techniques in an integrated manner They present both theory and applications including industrial applications and the book contains numerous worked examples problems and case studies Covering the state of the art in soft computing techniques the book gives the reader sufficient knowledge to tackle a wide range of complex systems for which traditional techniques are inadequate Soft Computing and Intelligent Systems Madan M. Gupta, 1999-10-28 The field of soft computing is emerging from the cutting edge research over the last ten years devoted to fuzzy engineering and genetic algorithms The subject is being called soft computing and computational intelligence With acceptance of the research fundamentals in these important areas the field is expanding into direct applications through engineering and systems science This book covers the fundamentals of this emerging field as well as direct applications and case studies There is a need for practicing engineers computer scientists and system scientists to directly apply fuzzy engineering into a wide array of devices and systems *Soft Computing and Intelligent Systems Design: Theory, Tools and Applications* Karray, 2004 Intelligent Systems and Soft Computing Behnam Azvine, Nader Azarmi, Detlef D. Nauck, 2006-12-30 Artificial intelligence has traditionally focused on solving human centered problems like natural language processing or common sense reasoning On the other hand for a while now soft computing has been applied successfully in areas like pattern recognition clustering or automatic control The papers in this book explore the possibility of bringing these two areas together This book is unique in the way it concentrates on building intelligent software systems by combining methods from diverse disciplines such as fuzzy set theory neuroscience agent technology knowledge discovery and symbolic artificial intelligence The first part of the book focuses on foundational aspects and future directions the second part provides the reader with an overview of recently developed software tools for building flexible intelligent systems the final section studies developed applications in various fields **Hybrid Intelligent Systems for Pattern Recognition Using Soft Computing** Patricia Melin, Oscar Castillo, 2005-03-08 This monograph describes new methods for intelligent pattern recognition using soft computing techniques including neural networks fuzzy logic and genetic algorithms

Hybrid intelligent systems that combine several soft computing techniques are needed due to the complexity of pattern recognition problems. Hybrid intelligent systems can have different architectures which have an impact on the efficiency and accuracy of pattern recognition systems to achieve the ultimate goal of pattern recognition. This book also shows results of the application of hybrid intelligent systems to real world problems of face fingerprint and voice recognition. This monograph is intended to be a major reference for scientists and engineers applying new computational and mathematical tools to intelligent pattern recognition and can be also used as a textbook for graduate courses in soft computing intelligent pattern recognition computer vision or applied artificial intelligence.

Analysis and Design of Intelligent Systems Using Soft Computing Techniques Patricia Melin, 2007-06-05 This book comprises a selection of papers on new methods for analysis and design of hybrid intelligent systems using soft computing techniques from the IFSA 2007 World Congress held in Cancun Mexico June 2007.

Soft Computing for Hybrid Intelligent Systems Oscar Castillo, Patricia Melin, Witold Pedrycz, 2008-08-25 We describe in this book new methods and applications of hybrid intelligent systems using soft computing techniques. Soft Computing (SC) consists of several intelligent computing paradigms including fuzzy logic neural networks and evolutionary algorithms which can be used to produce powerful hybrid intelligent systems. The book is organized in five main parts which contain a group of papers around a similar subject. The first part consists of papers with the main theme of intelligent control which are basically papers that use hybrid systems to solve particular problems of control. The second part contains papers with the main theme of pattern recognition which are basically papers using soft computing techniques for achieving pattern recognition in different applications. The third part contains papers with the themes of intelligent agents and social systems which are papers that apply the ideas of agents and social behavior to solve real world problems. The fourth part contains papers that deal with the hardware implementation of intelligent systems for solving particular problems. The fifth part contains papers that deal with modeling simulation and optimization for real world applications.

Genetic Algorithms And Fuzzy Logic Systems Soft Computing Perspectives Elie Sanchez, Takanori Shibata, Lotfi A Zadeh, 1997-03-15 Ever since fuzzy logic was introduced by Lotfi Zadeh in the mid sixties and genetic algorithms by John Holland in the early seventies these two fields widely been subjects of academic research the world over. During the last few years they have been experiencing extremely rapid growth in the industrial world where they have been shown to be very effective in solving real world problems. These two substantial fields together with neurocomputing techniques are recognized as major parts of soft computing a set of computing technologies already riding the waves of the next century to produce the human centered intelligent systems of tomorrow. The collection of papers presented in this book shows the way. The book also contains an extensive bibliography on fuzzy logic and genetic algorithms.

Soft Computing Based Modeling in Intelligent Systems Valentina Emilia Balas, János Fodor, Annamária R. Várkonyi-Kóczy, 2009-03-03 The book *Soft Computing Based Modeling in Intelligent Systems* contains the tended works originally presented at the IEEE

International Workshop SOFA 2005 and additional papers SOFA an acronym for SOFt computing and Applications is an international workshop intended to advance the theory and applications of intelligent systems and soft computing Lotfi Zadeh the inventor of fuzzy logic has suggested the term Soft Computing He created the Berkeley Initiative of Soft Computing BISC to connect researchers working in these new areas of AI Professor Zadeh participated actively in our workshop Soft Computing techniques are tolerant to imprecision uncertainty and partial truth Due to the large variety and complexity of the domain the constituting methods of Soft Computing are not competing for a comprehensive ultimate solution Instead they are complementing each other for dedicated solutions adapted to each specific problem Hundreds of concrete applications are already available in many domains Model based approaches offer a very challenging way to integrate a priori knowledge into procedures Due to their flexibility robustness and easy interpretability the soft computing applications will continue to have an exceptional role in our technologies The applications of Soft Computing techniques in emerging research areas show its maturity and usefulness The IEEE International Workshop SOFA 2005 held Szeged Hungary and Arad Romania in 2005 has led to the publication of these two edited volumes This volume contains Soft Computing methods and applications in modeling optimisation and prediction *Intelligent and Soft Computing in Infrastructure Systems Engineering* Kasthurirangan Gopalakrishnan, Halil Ceylan, Nii O. Attoh-Okine, 2009-11-23 The term soft computing applies to variants of and combinations under the four broad categories of evolutionary computing neural networks fuzzy logic and Bayesian statistics Although each one has its separate strengths the complementary nature of these techniques when used in combination hybrid makes them a powerful alternative for solving complex problems where conventional mathematical methods fail The use of intelligent and soft computing techniques in the field of geotechnical and pavement engineering has steadily increased over the past decade owing to their ability to admit approximate reasoning imprecision uncertainty and partial truth Since real life infrastructure engineering decisions are made in ambiguous environments that require human expertise the application of soft computing techniques has been an attractive option in pavement and geomechanical modeling The objective of this carefully edited book is to highlight key recent advances made in the application of soft computing techniques in pavement and geotechnical systems Soft computing techniques discussed in this book include but are not limited to neural networks evolutionary computing swarm intelligence probabilistic modeling kernel machines knowledge discovery and data mining neuro fuzzy systems and hybrid approaches Highlighted application areas include infrastructure materials modeling pavement analysis and design rapid interpretation of nondestructive testing results porous asphalt concrete distress modeling model parameter identification pavement engineering inversion problems soil grade soils characterization and backcalculation of pavement layer thickness and moduli
