Mixed-Mode Modelling: Mixing Methodologies For Organisational Intervention M.G. Nicholls,S.A. Clarke,B. Lehaney,2013-12-01 The 1980s and 1990s have seen a growing interest in research and practice in the use of methodologies within problem contexts characterised by a primary focus on technology human issues or power During the last five to ten years this has given rise to challenges regarding the ability of a single methodology to address all such contexts and the consequent development of approaches which aim to mix methodologies within a single problem situation This has been particularly so where the situation has called for a mix of technological the so called hard and human centred so called soft methods The approach developed has been termed mixed mode modelling The area of mixed mode modelling is relatively new with the phrase being coined approximately four years ago by Brian Lehaney in a keynote paper published at the 1996 Annual Conference of the UK Operational Research Society Mixed mode modelling as suggested above is a new way of considering problem situations faced by organisations Traditional technological approaches used in management science have suffered criticisms relating to their adequacy in the past few decades and these hard approaches have been replaced by soft methods which consider process more relevant than outcome However the sole use of human centred approaches to organisational problems has also proved to be inadequate Mixed mode modelling accepts the importance of both process and

outcome and provides enabling mechanisms for hard and soft investigation to be undertaken *Evolutionary Computation and Optimization Algorithms in Software Engineering: Applications and Techniques* Chis, Monica, 2010-06-30 *Evolutionary Computation and Optimization Algorithms in Software Engineering Applications and Techniques* lays the foundation for the successful integration of evolutionary computation into software engineering It surveys techniques ranging from genetic algorithms to swarm optimization theory to ant colony optimization demonstrating their uses and capabilities These techniques are applied to aspects of software engineering such as software testing quality assessment reliability assessment and fault prediction models among others to providing researchers scholars and students with the knowledge needed to expand this burgeoning application

Safety-Critical Systems: The Convergence of High Tech and Human Factors Felix Redmill, Tom

Anderson, 2012-12-06 Safety critical systems in the sense of software based systems used in safety critical applications are high tech They are products of modern technology Their effective efficient and safe functioning depends not only on the development of the right technologies but also on the right use of them The safety of a system may be compromised not only by faults in the system but also by the use in the first place of an unreliable unsafe or unproved technology in its development The key to the development and use of both technologies and systems is the human being Until recently the importance of human involvement other than at the direct operational level was hardly admitted But now the unreliability of humans is recognised as is the potential for latent faults to be introduced into systems at any point in their life cycles by all who are involved with them including designers and strategic decision makers
