Soft Computing In Information Retrieval Soft Computing In Information Retrieval:

Soft Computing in Information Retrieval Fabio Crestani, Gabriella Pasi, 2013-03-19 Information retrieval IR aims at defining systems able to provide a fast and effective content based access to a large amount of stored information The aim of an IR system is to estimate the relevance of documents to users information needs expressed by means of a query This is a very difficult and complex task since it is pervaded with imprecision and uncertainty Most of the existing IR systems offer a very simple model of IR which privileges efficiency at the expense of effectiveness A promising direction to increase the effectiveness of IR is to model the concept of partially intrinsic in the IR process and to make the systems adaptive i e able to learn the user s concept of relevance To this aim the application of soft computing techniques can be of help to obtain greater flexibility in IR systems

Fuzzy Information Retrieval Donald H. Kraft, Erin Colvin, 2017-01-23 Information retrieval used to mean looking through thousands of strings of texts to find words or symbols that matched a user s query Today there are many models that help index and search more effectively so retrieval takes a lot less time Information retrieval IR is often seen as a subfield of computer science and shares some modeling applications storage applications and techniques as do other disciplines like artificial intelligence database management and parallel computing This book introduces the topic of IR and how it differs from other computer science disciplines A discussion of the history of modern IR is briefly presented and the notation of IR as used in this book is defined The complex notation of relevance is discussed Some applications of IR is noted as well since IR has many practical uses today Using information retrieval with fuzzy logic to search for software terms can help find software components and ultimately help increase the reuse of software This is just one practical application of IR that is covered in this book Some of the classical models of IR is presented as a contrast to extending the Boolean model This includes a brief mention of the source of weights for the various models In a typical retrieval environment answers are either yes or no i e on or off On the other hand fuzzy logic can bring in a degree of match vs a crisp i e strict match This too is looked at and explored in much detail showing how it can be applied to information retrieval Fuzzy logic is often times considered a soft computing application and this book explores how IR with fuzzy logic and its membership functions as weights can help indexing querying and matching Since fuzzy set theory and logic is explored in IR systems the explanation of where the fuzz is ensues The concept of relevance feedback including pseudorelevance feedback is explored for the various models of IR For the extended Boolean model the use of genetic algorithms for relevance feedback is delved into The concept of query expansion is explored using rough set theory Various term relationships is modeled and presented and the model extended for fuzzy retrieval An example using the UMLS terms is also presented The model is also extended for term relationships beyond synonyms Finally this book looks at clustering both crisp and fuzzy to see how that can improve retrieval performance An example is presented to illustrate the concepts

Crestani,2009-09-02 This book presents recent studies on the application of Soft Computing techniques in information access on the World Wide Web The book is divided in four parts reflecting the areas of research of the presented works such as Document Classification Semantic Web Web Information Retrieval and Web Applications The text demonstrates that Web Information Retrieval is a stimulating area of research where Soft Computing technologies can be applied satisfactorily

Lectures on Information Retrieval Maristella Agosti,Fabio Crestani,Gabriella Pasi,2003-05-15 Information Retrieval IR is concerned with the effective and efficient retrieval of information based on its semantic content The central problem in IR is the quest to find the set of relevant documents among a large collection containing the information sought satisfying a user's information need usually expressed in a natural language query Documents may be objects or items in any medium text image audio or indeed a mixture of all three This book presents 12 revised lectures given at the Third European Summer School in Information Retrieval ESSIR 2000 held at the Villa Monastero Varenna Italy in September 2000 The first part of the book is devoted to the foundation of IR and related areas the second part on advanced topics addresses various current issues from usability aspects to Web searching and browsing *Soft Computing in Information Retrieval* Fabio

Rijsbergen,2003-07-31 The annual colloquium on information retrieval research provides an opportunity for both new and established researchers to present papers describing work in progress or final results This colloquium was established by the BCS IRSG British Computer Society Information Retrieval Specialist Group and named the Annual Colloquium on Information Retrieval Research Recently the location of the colloquium has alternated between the United Kingdom and continental Europe To reflect the growing European orientation of the event the colloquium was renamed European Annual Colloquium

on Information Retrieval Research from 2001 Since the inception of the colloquium in 1979 the event has been hosted in the city of Glasgow on four separate occasions However this was the rst time that the organization of the colloquium had been jointly undertaken by three separate computer and information science departments an indication of the collaborative nature and diversity of IR research within the universities of the West of Scotland The organizers of ECIR 2002 saw a sharp increase in the number of go quality submissions in answer to the call for papers over previous years and as such 52 submitted papers were each allocated 3 members of the program committee for double blind review of the manuscripts A total of 23 papers were eventually selected for oral presentation at the colloquium in Glasgow which gave an acceptance rate of less than 45% and ensured a very high standard of the papers presented

String Processing and Information Retrieval Mario A. Nascimento, Edleno S. de Moura, Arlindo L. Oliveira, 2003-12-12 This volume of the Lecture Notes in Computer Science series provides a c prehensive state of the art survey of recent advances in string processing and information retrieval It includes invited and research papers presented at the 10th International Symposium on String Processing and Information Retrieval SPIRE 2003 held in Manaus Brazil SPIRE 2003 received 54 full submissions from 17 countries namely Argentina 2 Australia 2 Brazil 9 Canada 1 Chile 4 Colombia 2 Czech Republic 1 Finland 10 France 1 Japan 2 Korea 5 Malaysia 1 Portugal 2 Spain 6 Turkey 1 UK 1 USA 4 the numbers in parentheses indicate the number of submissions from that country In the nontrivial task of selecting the papers to be published in these proceedings we were fortunate to count on a very international program committee with 43 members representing all continents but one These people in turn used the help of 40 external referees During the review process all but a few papers had four reviews instead of the usual three and at the end 21 submissions were accepted to be published as full papers yielding an acceptance rate of about 38% An additional set of six short papers was also accepted The technical program spans over the two well defined scopes of SPIRE string processing and information retrieval with a number of papers also focusing on important application domains such as bioinformatics SPIRE 2003 also features two invited speakers Krishna Bharat Google Inc and Joao Meidanis State Univ of Campinas and Scylla Bioinformatics
