The Neurocognition Of Language:

The Neurocognition of Language Colin M. Brown, Peter Hagoort, 2000 an important and captivating book one that has been long awaited by all researchers interested in language and the brain Trends in Cognitive Sciences 1999 The Neurocognition of Language brings together experts on human language and the brain to present the first critical overview of the cognitive neuroscience of language one of the fastest moving and most exciting areas today In depth discussion of the representations and structures of language as well as of the cognitive architectures which underlie speaking listening and reading will provide a basis for future brain imaging research In addition the existing brain imaging literature on word and sentence processing is critically reviewed as well as contributions from brain lesion data Finally the book discusses the prospects and problems of brain imaging techniques for the study of language presents some of the most recent and promising analytic procedures for relating brain imaging data to the higher cognitive functions and contains a review of the neuroanatomical structure of Broca's language area Uniquely interdisciplinary this book will provide researchers and students in cognitive neuroscience with state of the art reviews of the major language functions while being of equal interest to researchers in linguistics and language who want to learn about the neural bases of language It will be an essential purchase for anyone requiring an overview of our current understanding of the relation between language and the brain

The Neurocognition of Language Colin M. Brown, Peter Hagoort, 1999 Providing an overview of the cognitive neuroscience of language this text discusses problems of brain imaging techniques for the study of language It also presents procedures for relating imaging data to the higher cognitive functions *The Neurocognition of Language* Colin M. Costa, Kristof Strijkers, 2012-06-01 Over the last decades neuroscience has passed beyond mere phrenology and erpology and has become an important tool for investigating the spatial temporal and functional brain dynamics underlying human behavior In this Special Issue we would like to give a broad overview of recent significant contributions that neuroscientific research has provided to one of the most practiced psychomotor skills unique to humans namely language production Physiological studies in language production have not been as extensive compared to many other areas of human cognition and have just currently begun to generate important evidence for uncovering the cognitive mechanisms behind our ability to produce fast and efficient speech Nonetheless these findings have already demonstrated their scientific value and interest in neuroscientific approaches for studying language production is increasing exponentially Therefore we believe that a topic specially dedicated to neurocognitive advances in language production is not just in its place but even necessary Rather than focusing on a specific topic the idea is to cover many of the important aspects involved in producing speech semantics word retrieval syntax phonology motor preparation and control gathered from various paradigms e g object naming word naming etc and various populations monolinguals bilinguals patients The goal is to provide readers with a comprehensive overview of the general questions being addressed in neuroscientific studies on language production where the research stands how these findings are of importance for understanding and constraining cognitive models and which future directions have to be taken To this end we will invite experts in the field who have made significant contributions in the last several years to confer an important topic of language production critically discuss neuroscientific findings on this topic relate it to the actual behavior and cognitive models and importantly though novel questions which can be derived from their results and facilitate future research in the field Hereby we hope this Research Topic will be a source of reference both for experts as novices who wish to explore the various mental operations involved in language production from a neurocognitive point of view

Neuropsychology of Communication Michela Balconi, 2010-09-08 In this volume the communicative and neuropsychological correlates of daily interactions are discussed The predominant account on explaining the construction of meaning by humans is the inter relational perspective that postulates an intentional convergence of meaning arising as a consequence of the active exchanges between people The neural correlates of communication were illustrated in the light of new empirical results considering the main topics of a language and language development b pragmatics and neuropragmatics of communication c neurocognition and the cognitive bases of intentions d nonverbal communication and emotion contribution to the communicative systems New methodological approaches are considered with particular attention to neuroimaging such as PET and fMRI and brain stimulation techniques as MEG and TMS as well as their application to the clinical field

Cognitive Neuroscience of Language David Kemmerer, 2022-09-27 Cognitive Neuroscience of Language provides an up to date wide ranging and pedagogically practical survey of the most important developments in this exciting field It guides students through all of the major areas of investigation beginning with the fundamental aspects of brain

structure and function and then following with key topics such as classic and progressive aphasia syndromes speech perception and production the meanings of object nouns action verbs and abstract words the formulation and comprehension of complex expressions including grammatically inflected words complete sentences and entire stories and several other domains of neurolinguistic research including reading and writing sign language and the bilingual brain Drawing heavily on prominent theoretical models the core chapters illustrate how such frameworks are supported and sometimes challenged by experiments employing diverse brain mapping techniques This edition has been thoroughly updated throughout and now includes a dedicated chapter on the neural substrates of bilingualism Chapters have been revised to reflect the most salient developments in the field and the book has undergone a thoughtful restructure to mirror course teaching While the study of language can be challenging the text has been written accessibly and requires no previous knowledge of either neuroscience or linguistics and includes definitions of technical terms and explanations of important principles from both disciplines along the way Accompanied by online resources for students and instructors it is an essential companion for graduate or upper level undergraduate students

Twenty-First Century Psycholinguistics Anne Cutler, 2017-09-25

Psycholinguistics is an interdisciplinary field and hence relationships are at its heart First and foremost is the relationship between its two parent disciplines psychology and linguistics a relationship which has changed and advanced over the half

century of the field's independent existence At the beginning of the 21st Century psycholinguistics forms part of the rapidly developing enterprise known as cognitive neuroscience in which the relationship between biology and behavior plays a central role Psycholinguistics is about language in communication so that the relationship between language production and comprehension has always been important and as psycholinguistics is an experimental discipline it is likewise essential to find the right relationship between model and experiment This book focuses in turn on each of these four cornerstone relationships Psychology and Linguistics Biology and Behavior Production and Comprehension and Model and Experiment The authors are from different disciplinary backgrounds but share a commitment to clarify the ways that their research illuminates the essential nature of the psycholinguistic enterprise

Language and the Brain Yosef Grodzinsky, Lewis P.
