Models for Planning Wildlife Conservation in Large Landscapes

Joshua Millspaugh, Frank R. Thompson, 2011-04-28 A single resource volume of information on the most current and effective techniques of wildlife modeling Models for Planning Wildlife Conservation in Large Landscapes is appropriate for students and researchers alike The unique blend of conceptual methodological and application chapters discusses research applications and concepts of modeling and presents new ideas and strategies for wildlife habitat models used in conservation planning The book makes important contributions to wildlife conservation of animals in several ways 1 it highlights historical and contemporary advancements in the development of wildlife habitat models and their implementation in conservation planning 2 it provides practical advice for the ecologist conducting such studies and 3 it supplies directions for future research including new strategies for successful studies Intended to provide a recipe for successful development of wildlife habitat models and their implementation in conservation planning the book could be used in studying wildlife habitat models conservation planning and management techniques Additionally it may be a supplemental text in courses dealing with quantitative assessment of wildlife populations Additionally the length of the book would be ideal for graduate student seminar course Using wildlife habitat models in conservation planning is of considerable interest to wildlife biologists With ever tightening budgets for wildlife research and planning activities there is a growing need to use computer methods Use of

simulation models represents the single best alternative However it is imperative that these techniques be described in a single source Moreover biologists should be made aware of alternative modeling techniques It is also important that practical guidance be provided to biologists along with a demonstration of utility of these procedures Currently there is little guidance in the wildlife or natural resource planning literature on how best to incorporate wildlife planning activities particularly community based approaches Now is the perfect time for a synthestic publication that clearly outlines the concepts and available methods and illustrates them Only single resource book of information not only on various wildlife modeling techniques but also with practical guidance on the demonstrated utility of each based on real world conditions Provides concepts methods and applications for wildlife ecologists and others within a GIS context Written by a team of subject area experts

Futureselves Paul Englert,2023-11-25 Futureselves are the visions that we have for ourselves in the future This book covers how these visions are central to our understanding of human behaviour as inherently goal driven It covers these concepts both scientifically and practically exploring both impact on behaviour as well as a guide on how to use Futureselves for self knowledge and self improvement Futureselves brings together a long history of teleological approaches in psychotherapy and ties the Futureselves concept to contemporary philosophical ideas such as the absence of free will The book is suitable for undergraduate and post graduate studies into the nature of the self and self development

Design Strategy Nancy C. Roberts, 2023-11-14 A new approach to addressing the contemporary world s most difficult challenges such as climate change and poverty Conflicts over the problem and the solution plague the modern world and land problem solvers in what has been called wicked problem territory a social space with high levels of conflict over problems and solutions In Design Strategy Nancy C Roberts proposes design as a strategy of problem solving to close the gap between an existing state and a desired state Utilizing this approach designers and change agents are better able to minimize self defeating conflicts over problems and solutions break the

logjam of opposition and avoid the traps that lock problem solvers into a never ending cycle of conflict Design as a field continues to grow and evolve but Design Strategy focuses on three levels of design where wicked problems tend to lurk strategic design of private and public organizations systemic design of networked and overlapping economic technical political and social subsystems and regenerative design of life giving realignment between humanity and nature Within this framework Roberts presents refreshingly interdisciplinary case studies that integrate theory and practice across diverse fields to guide professionals in any domain from business and nonprofit organizations to educational and healthcare systems and finally offers hope that humanity can tackle the existential challenges we face in the twenty first century
