method is presented with both a theoretical background and the practical information that is useful for any data analyst. Empirical examples showcase the real world applications of the discussed concepts and models and each chapter concludes with a Points to Remember section that contains a brief summary of key ideas. All of the analyses in the book are performed using Proc LCA and Proc LTA, the authors' own software packages that can be run within the SAS environment. A related Web site houses information on these freely available programs and the book's data sets, encouraging readers to reproduce the analyses and also try their own variations.

It is also a valuable resource for researchers and practitioners in the social, behavioral, and health sciences who conduct latent class and latent transition analysis in their everyday work.

Extremes in Random Fields Benjamin Yakir, 2013-08-01. Presents a useful new technique for analyzing the extreme value behaviour of random fields. Modern science typically involves the analysis of increasingly complex data. The extreme values that emerge in the statistical analysis of complex data are often of particular interest. This book focuses on the analytical approximations of the statistical significance of extreme values. Several relatively complex applications of the technique to problems that emerge in practical situations are presented. All the examples are difficult to analyze using classical methods and as a result the author presents a novel technique designed to be more accessible to the user. Extreme value analysis is widely applied in areas such as operational research, bioinformatics, computer science, finance, and many other disciplines. This book will be useful for scientists, engineers, and advanced graduate students who need to develop their own statistical tools for the analysis of their data. Whilst this book may not provide the reader with the specific answer, it will inspire them to rethink their problem in the context of random fields, apply the method, and produce a solution.
