Today customers are no longer living in a world of licensed software. Curiosity increased the demand for investigating the Open Source world for Community Open Source and Enterprise grade applications. IBM as one of the contributors to the Open Source community is interested in helping the software be maintained and supported. Having companies such as IBM support the evolution of Open Source software helps to keep the Open Source community striving for enterprise grade open source solutions. Lately companies are working on deciphering how to take advantage of Enterprise and Community Open Source to implement in their enterprises. The business case for open source software is no longer a mystery and no surprise that most of the new positions in IT enterprises are related to open source projects. The ability of a large enterprise to manage this sort of implementations is to engage in a hypertrophied cooperation where the ability to not only cooperate with teams and people outside your organization but also to find new ways of working together and devise new ways to improve the software and its code. A goal for this publication is to help the client's journey into the open source space and implement a private Cloud Container based architecture with the ability to manage the entire IT Service Management processes from the open source framework. This publication describes the architecture and implementation details of the solution. Although not every piece of this solution is documented here, this book does provide instructions for what was achieved incorporating open source technologies. Moreover, with this publication, the team shares their collaboration experiences working in a team of technologists, open source developers, Red Hat and the open source community. This publication is for designers, developers, managers, and anyone who is considering starting a Cloud open source project or users who started that journey. This book also can be a manual to guide the implementation of a technical viable architecture and help those enterprises participate in an open source project but have not done so before. The reader must be familiar with principles in programming and basic software engineering concepts such as source code, compilers, and patches.

IBM Software Defined Infrastructure for Big Data Analytics Workloads Dino Quintero, Daniel de Souza Casali, Marcelo Correia Lima, Istvan Gabor Szabo, Maciej Olejniczak, Tiago Rodrigues de Mello, Nilton Carlos dos Santos, IBM Redbooks, 2015-06-29. This IBM Redbooks publication documents how IBM Platform Computing with its IBM Platform Symphony MapReduce framework, IBM Spectrum Scale based Upon IBM GPFS™ IBM Platform LSF, the Advanced Service Controller for Platform Symphony, are work together as an infrastructure to manage not just Hadoop related offerings but many popular industry offerings such as Apache Spark, Storm, MongoDB, Cassandra, and so on. It describes the different ways to run Hadoop in a big data environment and demonstrates how IBM Platform Computing solutions such as Platform Symphony and Platform LSF with its MapReduce Accelerator can help performance and agility to run Hadoop on distributed workload managers offered by IBM.
