Solid Mechanics Popov Solution Manual:

Method of Dimensionality Reduction in Contact Mechanics Valentin L. Popov, Markus Hess, Emanuel Willert, 2018-08-08

The present book is a collection of open access papers describing the foundations and applications of the Method of Dimensionality Reduction MDR first published in the Journal Facta Universitatis Series Mechanical Engineering in the years 2014 2018 The Method of Dimensionality Reduction MDR is a method of calculation and simulation of contacts of elastic and viscoelastic bodies It consists essentially of two simple steps a substitution of the three dimensional continuum by a uniquely defined one dimensional linearly elastic or viscoelastic foundation Winkler foundation and b transformation of the three dimensional profile of the contacting bodies by means of the MDR transformation As soon as these two steps are done the contact problem can be considered to be solved For axial symmetric contacts only a small calculation by hand is required which does not exceed elementary calculus and will not be a barrier for any practically oriented engineer Alternatively the MDR can be implemented numerically which is almost trivial due to the independence of the foundation elements In spite of its simplicity all results are exact The present book brings together papers covering the most important aspects of the MDR and providing a practical guide for its use

Classical and Computational Solid Mechanics Yuan-cheng Fung, Pin Tong, 2001 This invaluable book has been written for engineers and engineering scientists in a style that is readable precise concise and practical It gives first priority to the formulation of problems presenting the classical results as the gold standard and the numerical approach as a tool for obtaining solutions The classical part is a revision of the well known text Foundations of Solid Mechanics with a much expanded discussion on the theories of plasticity and large elastic deformation with finite strains The computational part is all new and is aimed at solving many major linear and nonlinear boundary value problems
