Abstract

Ovarian malignancy the third most common gynecological malignancy and is the leading cause of death in women. Non-specific clinical presentation delays the diagnosis, and they often present in the advanced stage of disease. No imaging modality is recommended for screening as there is no significant mortality reduction. Ultrasound (USG) is usually the initial modality in suspected ovarian mass. MRI is recommended for the characterization of indeterminate ovarian or adnexal mass on USG. CT abdomen and pelvis with oral and IV contrast is the recommended imaging modality in staging the disease, predicting the resectability and in selecting the patients who would benefit from neoadjuvant chemotherapy. Early ovarian cancers are staged by post-surgical histology and undergo upfront surgery. Advanced disease benefit by neoadjuvant chemotherapy and less morbidity by interval cytoreduction where image-guided biopsy is performed for histological diagnosis. Follow-up recommendations are based on tumor histology. CT/PET CT is recommended for diagnosing recurrence.

Emergency Medicine books examines the bounceback visit putting the reader in the footsteps of the clinician as the patient deteriorates The story pauses at important decision points as possible management strategies are reviewed in a literature based fashion followed by a revelation of the path chosen by the actual provider As the patient s course progresses we reach additional decision points and address further clinical questions In addition to our chapter authors many with expertise in critical care emergency medicine we have an all star lineup of expert whisperers first an EM critical care section editor below and second EMCRIT org s double boarded critical care guru Scott Weingart Their comments are inserted in grey boxes and are intended to give tips and tricks borne of experience and to provide context to the literature as if they are standing over our shoulder and advising during a resuscitation Additionally there are three chapters where we address the medical legal aspects of care Enter Greg Henry MD past president of The American College of Emergency Physicians ACEP and one

of the most experienced physician medical legal experts in the country He opines on the approach that both the defense and plaintiff would likely pursue and by extension how we can make patients safer through our evaluation and documentation before there is an adverse outcome Whereas these chapters contain the actual documentation from the ED chart a very few chapters have slight modifications to the final aspects of the return visit at decision point 3 to allow for exploration of different critical care scenarios There is still plenty of commentary on the documentation missed red flags and what could have been done to improve care at the initial visit Our goal is to make each chapter challenging dynamic and realistic to move us from standard of care to excellence in care Book Review It's back it's Bouncebacks One of the mostly widely read and highly regarded education series in all of Emergency Medicine Clinicians fear the medical malpractice landscape but Mike Weinstock and the team give you all the tools you need to protect yourselves Documentation people documentation Now with a critical care version Read this book sleep better at night as simple as that Love love this series Mel Herbert MD MBBS BMedSci FACEP FAAEM Professor of Emergency Medicine at the Keck School of Medicine LAC USC Medical Center Owner and Editor of EM RAP

The SAGES Manual of Strategic Decision Making Carol E.H. Scott-Conner, José E. Torres, Nate Thepjatri, 2008-06-19 Minimal access whenever feasible in the performance of most general surgical procedures is now well established However many areas still need clarification They range from indications and contraindications to the optimal route of access as well as to choices to be made among the various procedures possible for any single surgical problem This Manual is unique in that unlike most manuals it is not so much a how to but more a when to the how to having been covered to a significant extent in the two previous SAGES manuals This work takes a series of common clinical scenarios and offers various detailed often contrasting approaches commonly but not exclusively minimal access discussing indications limitations and potential complications In this age of evidence based surgical practice the reader will find it refreshing to have abundant data and references to support or reject a particular approach or technique With a cadre of surgeon authors skilled in open as well as minimal access surgery including exible

endoscopy the student and practitioner of surgery is exposed to not only varying approaches to many common surgical conditions but also comes to appreciate how exibility and integration of various approaches can improve the outcome for the patient The forty six chapters can each constitute a stand alone discussion
