Perspectives on Health and Human Rights Sofia Gruskin, 2005 This anthology of articles collected by a cast of award winning scholars in the field of public health illustrates that promoting and protecting human rights is fundamental to promoting and protecting health New issues covered in this volume include emerging technologies family and health responding to violence and methods and strategies On Cloning John Harris, 2004 John Harris presents an informed defence of human cloning carefully exposing the rhetorical and highly dubious arguments against it He shows that far from ending the diversity of human life cloning has the power to improve and heal human life *Salvador Luria* Rena Selya, 2022-10-25 The life of Nobel winning biologist Salvador Luria whose passion for science was equaled by his commitment to political engagement in Cold War America Blacklisted from federal funding review panels but awarded a Nobel Prize for his research on bacteriophage biologist Salvador Luria 1912 1991 was as much an activist as a scientist In this first full length biography of Luria Rena Selya draws on extensive archival research interviews with Luria s family colleagues and students and FBI documents obtained through the Freedom of Information Act to create a compelling portrait of a man committed to both science and society In addition to his work with viruses and bacteria in the 1940s Luria broke new ground in molecular biology and cancer research from the 1950s to the 1980s and was a leader in calling for scientists to accept an educational and advisory responsibility to the public In return he believed the public should rely on science to strengthen social and political institutions Luria was born in Italy where the Fascists came to power when he was ten He left Italy for France due to the antisemitic Race Laws of 1938 and then fled as a Jewish refugee from Nazi Europe making his way to the United States Once an American citizen Luria became a grassroots activist on behalf of civil rights labor

representation nuclear disarmament and American military disengagement from the Vietnam and Gulf Wars Luria joined the MIT faculty in 1960 and was the founding director of the Center for Cancer Research Throughout his life he remained as passionate about his engagement with political issues as about his science and continued to fight for peace and freedom until his death

Food Biotechnology in Ethical Perspective Paul B. Thompson, 2007-05-05 Agrifood biotechnology the genetic transformation of plants and animals through recombinant means has created controversy in the food system for more than twenty years This thoroughly revised and amended edition of Paul B Thompson's path breaking study of ethical and philosophical issues raised by this technology up to date The original 1997 edition was the first book length treatment by a philosopher to focus on food and agricultural biotechnology covering ethical issues associated with risk assessment labelling animal transformation patents and the impact of biotechnology on traditional farming communities in both the developed and developing world The new edition reflects lessons from the hotly contested debates over those issues in the intervening decade and includes wholly new discussions on ethical issues associated with livestock cloning the Precautionary Principle and the transatlantic debate between United States and European perspectives on biotechnology Thompson's unique and insightful approach to addressing the risks and questions of public acceptability associated with novel technology stands as a model for anyone interested in technological innovation and social change The book should be of interest to scholars and citizens interested in the Internet or nanotechnology while it remains an essential resource for understanding the twists and turns of debate over the role of molecular genetics in the transformation of the global food system

Digital Government Darrell M. West, 2011-08-15 Few developments have had broader consequences for the public sector than the introduction of the Internet and digital technology In this book Darrell West discusses how new technology is altering governmental performance the political process and democracy itself by improving government responsiveness and increasing information available to citizens Using multiple methods case studies content analysis of over 17 000 government Web sites public and bureaucrat opinion survey data an e mail responsiveness test budget data and aggregate analysis the author presents the most comprehensive study of electronic government ever undertaken Among other topics he looks at how much change has taken place in the public sector what determines the speed and breadth of e government adoption and what the consequences of digital technology are for the public sector Written in a clear and analytical manner this book outlines the variety of factors that have restricted the ability of policy makers to make effective use of new technology Although digital government offers the potential for revolutionary change social political and economic forces constrain the scope of transformation and prevent government officials from realizing the full benefits of interactive technology

The Collapse of Darwinism, Or, The Rise of a Realist Theory of Life Graeme Donald Snooks, 2003-01-01 In this provocative work noted social and economic theorist Graeme D Snooks exposes fatal flaws in the foundations of the Darwinian theory of evolution Further he develops a remarkable replacement theory of evolution The new dynamic strategy theory views life as a strategic pursuit

rather than a game of chance in which organisms adopt dynamic strategies only one of which is genetic change to survive and prosper This theory reveals the organism as empowered rather than as the plaything of gods genes or blind chance And it provides a powerful new basis for humanism *The Fulbright Brainstorms on Bioethics* Arthur L. Caplan,2006

Cloning Stephen D. Fairbanks,2004 The terms recombinant DNA technology DNA cloning molecular cloning or gene cloning all refer to the same process the transfer of a DNA fragment of interest from one organism to a self replicating genetic element such as a bacterial plasmid The DNA of interest can then be propagated in a foreign host cell This technology has been around since the 1970s and it has become a common practice in molecular biology labs today Reproductive cloning is a technology used to generate an animal that has the same nuclear DNA as another currently or previously existing animal Dolly was created by reproductive cloning technology In a process called somatic cell nuclear transfer SCNT scientists transfer genetic material from the nucleus of a donor adult cell to an egg whose nucleus and thus its genetic material has been removed The reconstructed egg containing the DNA from a donor cell must be treated with chemicals or electric current in order to stimulate cell division Once the cloned embryo reaches a suitable stage it is transferred to the uterus of a female host where it continues to develop until birth Therapeutic cloning also called embryo cloning is the production of human embryos for use in research The goal of this process is not to create cloned human beings but rather to harvest stem cells that can be used to study human development and to treat disease Stem cells are important to biomedical researchers because they can be used to generate virtually any type of specialised cell in the human body This new book presents an up to date Chronology of Cloning along with current and selected abstracts dealing with cloning as well as a guide to books on the topic Access to the abstract and books sections is provided by title subject and author indexes

Iconizing of Literature, Art, Humanities, and Science Paula Wojcik,Sophie Picard,Hannes Höfer,2025-09-30 Why do people wear shirts with the Shakespeare quote to be or not be or a portrait of philosopher Slavoj i ek How does popular and mass media adaptation and appropriation influence theoretical or literary concepts like deconstruction or the Kafkaesque Why are Lolita Leonardo Da Vinci s Mona Lisa and Einstein ubiquitous and yet Leopold Bloom Francisco de Goya s The Naked Maja and Le Szil rd are not Our answer is simple because some works persons literary characters pieces of music or even theoretical concepts are cultural icons Cultivated by expert and in popular culture they become representatives of what is considered to be outstanding or even a peak of human culture As cultural icons they are venerated and sometimes desecrated in manifest or metaphorical iconoclasms By exploring cultural icons and their role in popular culture the contributions from the fields of theology musicology history fine arts linguistics film studies literary studies media studies and cultural studies provide a deeper understanding of the ways in which cultural meaning and value are created communicated and disseminated in our daily lives This is an open access book [Good Science](#) Charis Thompson,2013-12-20 An examination of a decade and a half of political controversy ethical debate and scientific progress in

stem cell research After a decade and a half human pluripotent stem cell research has been normalized There may be no consensus on the status of the embryo only a tacit agreement to disagree but the debate now takes place in a context in which human stem cell research and related technologies already exist In this book Charis Thompson investigates the evolution of the controversy over human pluripotent stem cell research in the United States and proposes a new ethical approach for good science Thompson traces political ethical and scientific developments that came together in what she characterizes as a procurial framing of innovation based on concern with procurement of pluripotent cells and cell lines a procures mandate and a proliferation of bio curatorial practices Thompson describes what she calls the ethical choreography that allowed research to go on as the controversy continued The intense ethical attention led to some important discoveries as scientists attempted to invent around ethical roadblocks Some ethical concerns were highly legible but others were hard to raise in the dominant procurial framing that allowed government funding for the practice of stem cell research to proceed despite controversy Thompson broadens the debate to include such related topics as animal and human research subjecthood and altruism Looking at fifteen years of stem cell debate and discoveries Thompson argues that good science and good ethics are mutually reinforcing rather than antithetical in contemporary biomedicine
